Artwork/Project Title
mainbipa.id

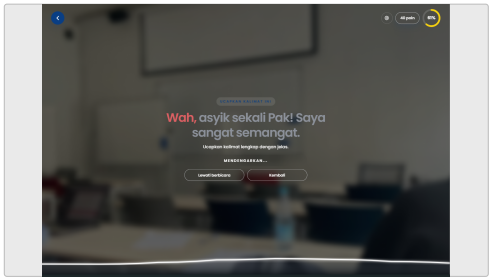

Indonesian language learning platform for BIPA learners

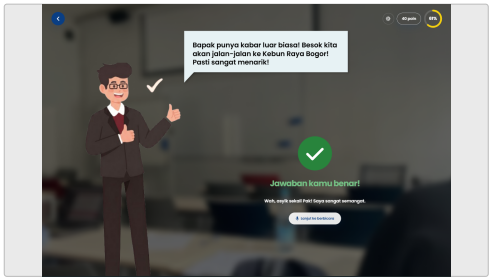

Artwork/Project Description
mainbipa.id is a language-learning platform designed for real educational use. It helps BIPA learners practice Indonesian through structured modules, guided progression, and practical learning context, with the emphasis on usable learning flow rather than a portfolio-only concept.

Hafidz Mulia
Full-stack developer and mathematics student.

Artwork/Project Title

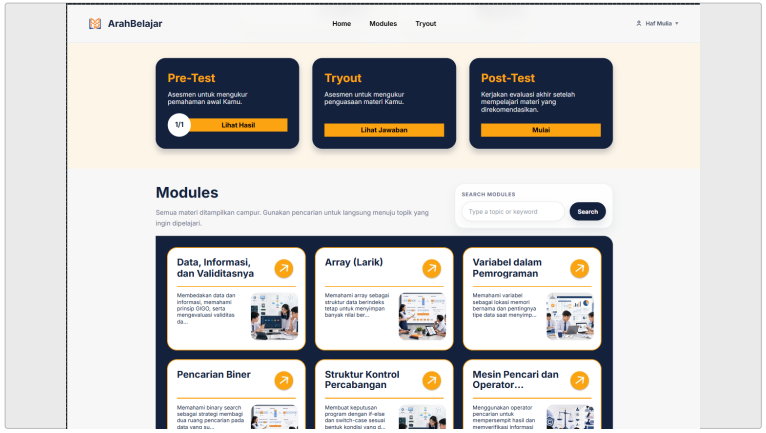

ArahBelajar

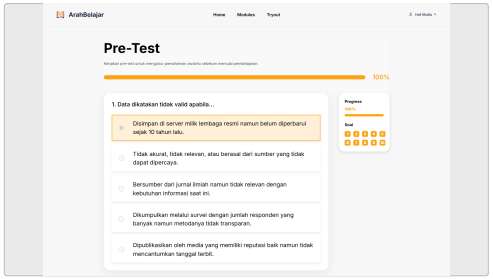

Adaptive learning platform for academic research

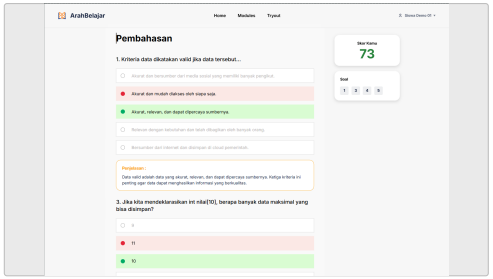

Artwork/Project Description

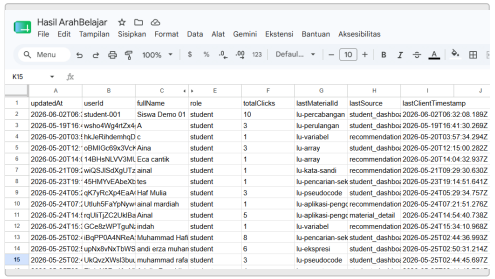

ArahBelajar turns a research-driven learning model into a usable product. It combines pretest, tryout, recommendation, scaffolding, and posttest flows in one platform, with dashboards and learner-facing usability that support measurable day-to-day academic use.

Artwork/Project Title
REAL KEKE

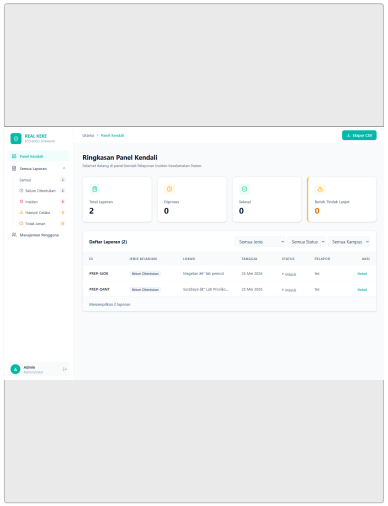

Mobile-first workplace safety incident reporting

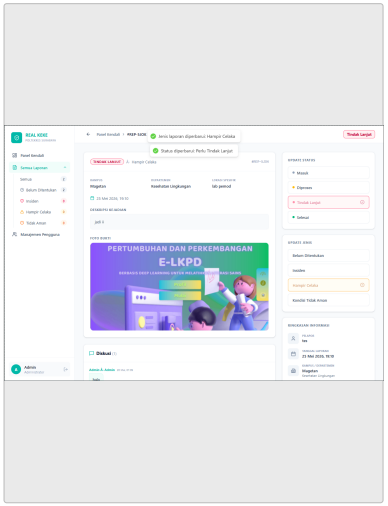

Artwork/Project Description
REAL KEKE is a mobile-first incident reporting product built for practical operational use. It supports submission, media evidence, status tracking, comments, and update notifications so field reporting becomes faster, clearer, and easier to monitor.

Artwork/Project Title
SMARTBALITA

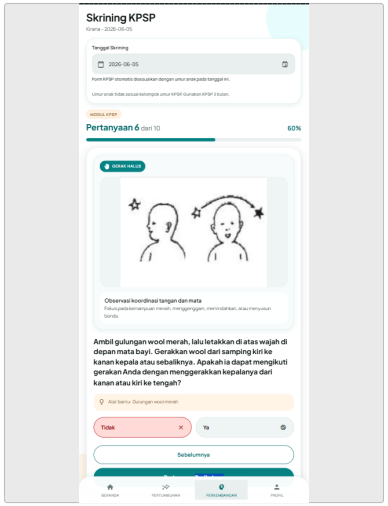

Mobile app for child-focused research support

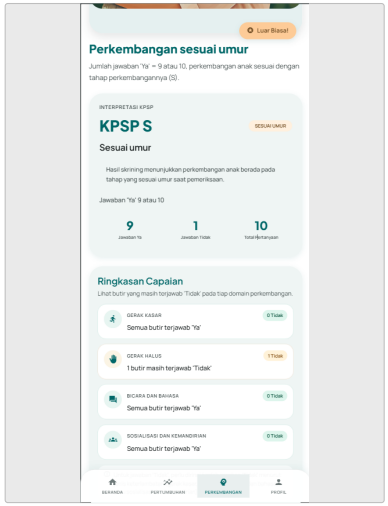

Artwork/Project Description
SMARTBALITA is a mobile application designed for child-focused support scenarios. The product emphasizes structured user flows, accessible mobile interaction patterns, and practical data capture while keeping the wording appropriately general for confidentiality.

Workflow automation product

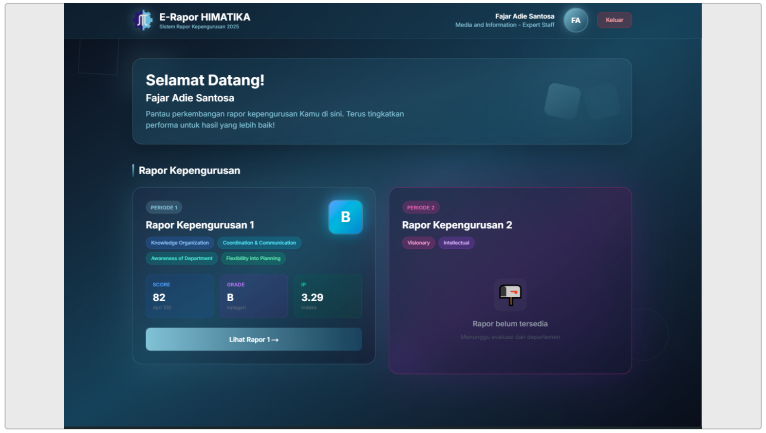

Publication Link
rapor-himatika.vercel.app

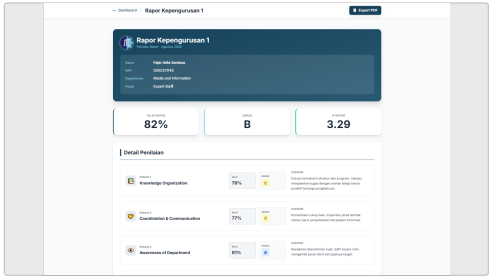

Artwork/Project Title
erapor

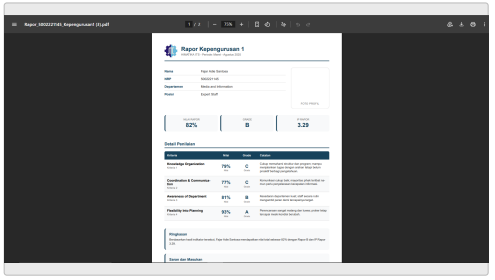

Automated reporting system for internal operations

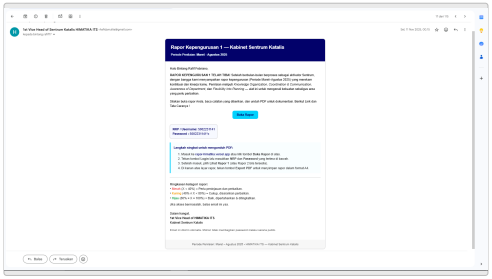

Artwork/Project Description
erapor came from a reporting workflow I experienced directly. Manual recap, repeated formatting, and scattered files made the process slow and fragile, so I turned it into a centralized product with dashboards, exports, and a more practical reporting flow.
